

Susterra Capital Partners Venture Capital Ltd. was established by private individuals with firm beliefs, who also wish to create values via their investments, where successful financial return and a sustainable positive environmental impact go hand-in-hand.

The first investment fund, Water Impact Fund I was launched in 2020, and wishes to contribute to the renewal and alteration of the water-technological sector through its investments.

Susterra's Water Impact Funds wishes to invest a significant part of its capital into innovative and scalable water and sewage technologies, whilst its remaining resources into technologies in the field of high water intensity, who aim to make water consumption more efficient and who reduce sewage emission. Furthermore, the fund seeks such smashing, justified and innovative business solutions, which via its technologies facilitate the creation and spread of smart cities, circular economy and other sustainable patterns.

The potential enterprises must prove their business-growth potential in the lines of creating a sustainable economic effect, whilst also providing a realistic exit strategy, which needs to be in accordance with the long-term environmental impact objectives.

The investor team of the Water Impact Fund is a well-established one, complementing one another, having altogether 190 years of business and industry experience. The necessary number and wide range of investment possibilities is provided by the extensive network of the team.
